

GATTI[®]
FLY RODS

OUR PHILOSOPHY

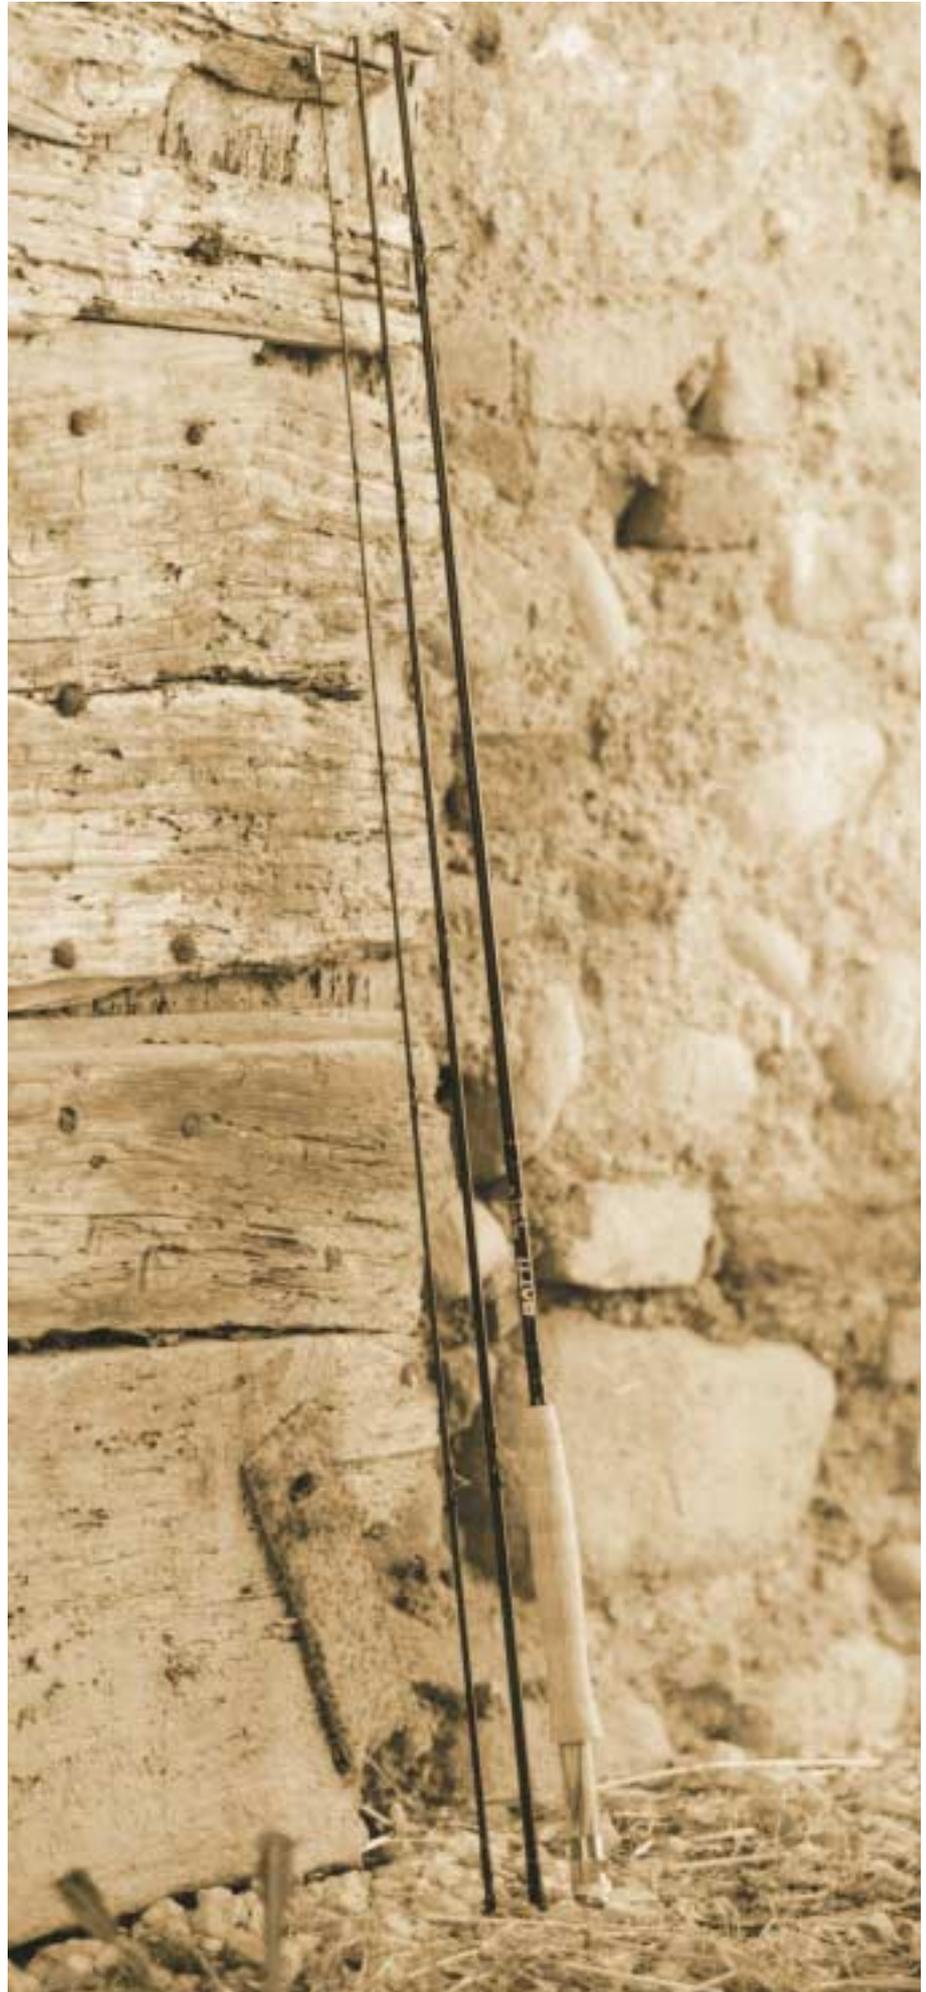

The goal of every Gatti engineer is to provide you with the most responsive fly rods in the world. We accomplish this by selecting the finest materials available anywhere and create a fly rod that is lighter in the hand, more powerful and yet smoother than any fly rod you've ever had the pleasure to cast.

It's easy to create a fly rod that is powerful and reliable if you don't consider weight as a factor. In fact, many of the "premium" fly rods available today are created that way. It's more difficult to create a fly rod that is light, powerful and reliable. Here at Gatti, we consider weight to be extremely important to the responsive capabilities of a fly rod. Our combination of the best materials, unique tapers and a revolutionary process that results in uniform wall thickness on each section of the rod blank, results in a fly rod that is more precise and virtually no spline to interfere with casting performance. Add the fact the Gatti fly rods are lighter than other fly rods in their class, and you have a fly rod that's a precision tool, pleasure to cast all day and will never leave your arm feeling tired.

In the world, there are pretty fly rods and there are performance fly rods. Gatti fly rods are as nice to look at as they are to cast. Hand crafted reels seats with exotic woods are combined with the finest hard chrome guides to create a work of art.

Sandro Gatti, general manager and rod designer

PA

PROGRESSIVE ACTION

IA

INTERMEDIATE ACTION

TA

TIP ACTION

The power of a fly rod lies within its ability to cast a fixed weight. This concept must be respected. In fact, it cannot be modified, for a rod is strictly bound to the size fly line for which it is designed. The action of a fly rod is the way in which its power is distributed, the character of the fly rod is reflected in the way it bends while being cast. The action of the fly rod should match the personal preference, style, and casting ability of the fly fisherman. Fly Rods of equal weight can be slower or faster depending on the action. In order to serve the need of all fly fishermen, we produce fly rods with three different actions.

TA Tip action fast action in a very light blank

IA Intermediate action precision in an easier casting rod

PA Progressive action fast and powerful

The FRX series is the most advanced expression of our production. The project of these intermediate action rods represents the synthesis of the characteristics of the FRD series. For every single section we have studied the taper according to the most suitable material in order to get the best performances linked to the most lightness, handling, accuracy and reliability. This design puts us in the front of the fly rod production industry.

2-3-4 PIECE FLY RODS
SERIES
FRX

The FRC series of fly rods are manufactured from a special high modulus graphite used only by Gatti. This technologically advanced graphite is combined with a smooth, progressive taper to produce fly rods that present even the smallest flies delicately, and protect the finest leaders, without sacrificing performance, accuracy or distance. The dark sapphire-blue blanks are finished with high quality brier-wood reel seats and single foot snake guides to produce a rod that's powerful, light, beautiful and smooth casting. The FRC series of rods are perfect for anglers who use long leaders and delicate flies to fish small streams and spring creeks for wary trout.

2-3 PIECE FLY RODS
 SERIES
FRC

The two piece FR-TA series rods are made from the same high modulus graphite as the FR-PA series, but the fast action tapers of the TA series achieve higher line speeds and tighter loops, than the other rods offered by Gatti. The rods in the TA series are the best choice for a person looking for a long casting, light-in-the-hand, fast action rod. The accuracy of these rods is superb. Some of the rods in this series are specialized, but the majority are designed to cover a broad range of conditions and needs. If you want a fast action rod that feels light but casts with the power of a heavier weight, this is the rod for you.

**2-3 PIECE FLY RODS
SERIES
FR**

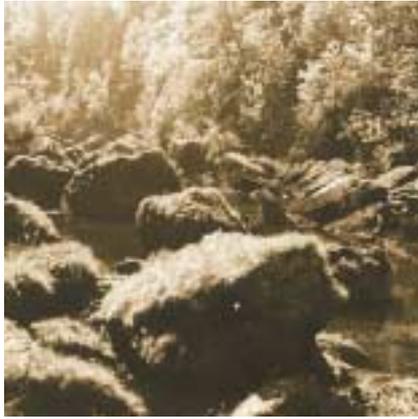

The space age materials and innovative design methods used to create the FR-3PA series results in the most technologically advanced fly rod available anywhere. These rods are created from the best uni-directional high modulus graphite using the Gatti exclusive "Uniform Thickness Structure" (UTS) process. They are carefully balanced to produce higher line speeds, superior distance, exceptional accuracy and greater control than other rods on the market. The FR-3PA series is the most extensive series in our production line of rods. It consists of 35 three piece models to cover every fly fishing need. Long favored by destination anglers for ease of storage when traveling, there is an FR-3PA rod that's ideal for every situation, from delicate freshwater to demanding saltwater.

In a world where everything goes so fast and changes very quickly, it is beautiful to know there are people who want to use the same rod for a lifetime and maybe present it to their children. Our bamboo rods are produced in a limited quantity (only 25-30 rods per year) and completely handcrafted using very high quality materials, are created to satisfy those people's needs. The same tapers of the graphite combined with the reinforced butts inside make these bamboo rods unique in their performance capabilities.

2 PIECE FLY RODS
 SERIES
BAMBOO

We believe it is very important for inexperienced casters to use quality, balanced rods designed to help the beginning angler. Our F-series rods will accelerate the learning process, giving beginners greater confidence and performance right from the start. The F-series consists of four general purpose rods made from high quality graphite and handcrafted with the same care as our other products make them worthy of the name they bear. Supplied with aluminium tube, cloth bag and lifetime warranty.

**2 PIECE FLY RODS
SERIES
F**

This series is produced with IM6 graphite and quality hardware. It represents our effort to produce a technically advanced, quality rod for beginners and experts alike. The action of this series makes casting at short to medium ranges easier, producing the best learning conditions for beginners. After experiencing the IM6 series the fly fisherman will remain attached to the Gatti name, even when he becomes more experienced and looks for a higher end rod.

SPINNING RODS
SERIES
SRX

We create our spinning rods using the same materials and technology we use in our fly rod production. This allows us to create spinning rods that are lighter, more responsive and more sensitive than other spinning rods on the market. These are not the rods the average fisherman would want to use. Indeed, there are fishermen outside the professional tournament circles who would understand why a spinning rod could be so much better. But, our constant research and solid commitment to the best quality would not allow us to use standard materials or offer any product that isn't absolutely the best product on the market. These rods are the best expression of technology and performance coupled with beauty and craftsmanship that money can buy. Every Gatti spinning rod is hand crafted using titanium-SIC guides, and high quality cork handle. The beauty of these rods is only equaled by their performance.

ewes and other components are made from stainless steel and brass, making our reels saltwater resistant. The smooth disc drag is made from a combination of teflon and vulcolan, and is resistant to temperatures up to 300 C. This superior drag allows the fisherman the opportunity to chase fish many times larger than other reels could handle, and to do with the confidence that his or her reel will live up to the task. When you look at a Gatti fly reel, you may think it looks simple compared to many other reels on the market. In some ways this is true. It does have fewer components than many reels, but fewer components have fewer chances to fail. You will not find jewels or heavy attachments on the reel to add to the weight, but you will experience jewel-like precision performance. No banners, no lights, no glowing additions, just reel, smooth, tough, flawless performance

MODEL 1 (Direct-drive only)

This model was designed for anglers who fish for trout in classic light line situations. It's a perfect choice for a 6'6" to 7'6" rod in a 2,3 or 4 weight.

The ultimate spring creek reel.

Weight 95 g (3.4 oz) **Diameter** 65 mm (2.55 in)

Capacity WF4F + 20 yd of 20 lb backing.

MODEL 2 (Direct-drive only)

The perfect balance for a 9 foot, 3 or 4 weight rod, or a 8 to 8 1/2 foot rod in a 5 or 6 weight. An excellent choice for an all-purpose freshwater reel.

Weight 130 g (4.65 oz) **Diameter** 75 mm (2.95 in)

Capacity WF6F + 60 yd of 20 lb backing.

MODEL 3 (Direct-drive or anti-reverse)

Designed for 9 to 10 weight lines, this is an excellent choice for small saltwater species such as large bonefish, small tarpon or striped bass. It's also a great choice for heavy freshwater fish such as large salmon, northern pike or large bass in heavy cover.

Weight 180 g (6.40 oz) **Diameter** 87 mm (3.42 in)

Capacity WF10F + 150 yd of 30 lb backing.

MODEL 4 (Direct-drive or anti-reverse)

The perfect big-game reel, designed to handle the toughest task with an 11 to 12 weight line. An ideal choice for tough saltwater gamefish like tarpon or permit, or the large freshwater fish like the king salmon or musky.

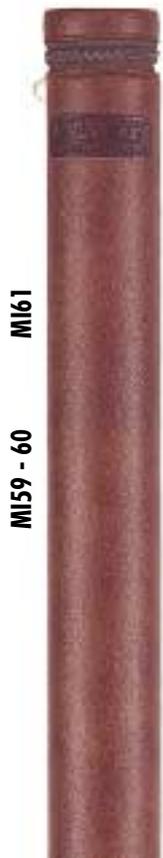

Weight 285 g (10.2 oz) **Diameter** 102 mm (4 in)

Capacity WF12F + 400 yd of 30 lb backing.

For the models 3 and 4 they are available standard spools and large arbor spools. These two spool models are interchangeable on the same frame and increase the versatility of each single model. The new teflon bush guarantees the perfect working in hardest use conditions even in lack of proper maintenance and lubrication.

Additional spare standard and compact spools are available in black, red and gold colour. This feature makes quicker the identification and choice of the line.

All Gatti rods are inscribed with an Identification number. With this number we can supply information about the warranty and replacement parts for each rod without having the customer send the rod back to Gatti. This will save the end user time, money and makes repair or replacement easier.

*Gatti Fly Rods carry a lifetime warranty against all manufacturer's defects for the original owner. **They are unconditionally guaranteed against breakage one time only.***

*The registration card "SIDE - B" **MUST** be sent directly to the manufacturer **within thirty days of purchase to validate the warranty.***

*In the event of breakage, the entire product, including broken parts or pieces, along with warranty claim certificate "SIDE - A" **MUST** be sent freight pre-paid to Gatti Fly Rods.*

This warranty will not cover damage caused by misuse, negligence, or normal wear after the unconditional warranty has been fulfilled.

If first claims are found to be of manufacturer's defect, the warranty claim certificate will be returned with the rod.

*If you have a breakage that is not covered by warranty that section can be replaced at a minimal cost. **This cost will be 60% of the current retail list price of the broken section.***

The warranty does not cover shipping or insurance.
